

TRANE®

Flex Series

Modular Air-cooled Chillers and Heat Pumps

Cooling Capacity 38 - 329 kW

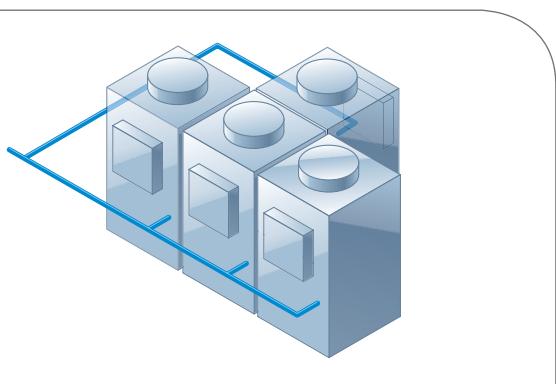

Heating Capacity 47 - 354 kW

FLEX

IR Ingersoll Rand®

Modular air/water chillers and heat pumps units with axial fans and scroll compressors.

High EER and COP for modular applications

The range is made up of 18 basic modules. Up to 12 units can be combined into one system in order to reach the required capacity.

Range description

- **C:** chillers
- **H:** heat pumps
- **MC:** modular chillers
- **MH:** modular heat pumps

Unit description

- Scroll compressors.
- ECO-PROFILE axial fans statically and dynamically balanced.
- Water side plate heat exchanger with differential pressure switch and antifreeze protection electric heater.
- Air side heat exchanger high efficiency finned coils with seamless copper tubes expanded into corrugated aluminium.
- Condensing and evaporating pressure control with variable fans speed modulation.
- Microprocessor-based controller.
- Thermostatic expansion valve.
- Casing and panels in galvanised and painted steel.

Energy-saving versions

- **D:** Partial recovery stainless steel brazed plate type desuperheater, externally insulated.
- **R:** Total recovery stainless steel brazed type exchanger, externally insulated.

Acoustic versions

- **LN:** Low noise, including fan speed regulation and soundproof compressors jackets.
- **SL:** Super low noise, including: condensing control with variable fan speed modulation, oversized coils, muffler on the compressors delivery lines and soundproof box for the compressors area.

Hydraulic versions

- **B M A:** Hydraulic kit including 1 or 2 pumps, available head pressure (B) Low (150 kPa), (M) Medium (250 kPa), (A) High (450 kPa), expansion vessel.
- **SB SM SA:** Hydraulic kit including 1 pump, available head pressure (B) Low (150 Kpa), (M) Medium (250 Kpa), (A) High (450 Kpa), expansion vessel, buffer tank.
- **XB XM XA:** Hydraulic kit including 2 pumps, available head pressure (B) Low (150 Kpa), (M) Medium (250 Kpa), (A) High (450 Kpa), expansion vessel, buffer tank.

Options

- Hybrid smart cooling® (2 way modulating valve, brazed heat exchanger).
- Remote adjustable set point. ⁽¹⁾
- Electronic expansion valve.
- Power factor correction to cos phi 0,91. ⁽²⁾
- Automatic circuit breakers for compressors.
- Automatic circuit breakers for fans.
- Over/under voltage + phase failure protection relay.
- Condensing control with variable fan speed modulation.

- Full inverter electronic fans.
- Soft starter.
- Low outdoor air temperature kit down to -10°C (in cooling mode only).
- Low outdoor air temperature kit down to - 20°C (in cooling mode only).
- Compressors sound jackets.
- High static pressure fans, 100 Pa.
- Pre painted condensing coils.
- Epoxy coated condensing coils fins.
- Copper/copper condensing coils.
- BLYGOLD condensing coils.
- Gas gauges.
- Anti intrusion grilles.

Accessories

- Kit GENIUS, including remote key pad and connection cable. ⁽³⁾
- Remote display.
- Signal amplification card (distances more than 50 m).
- Flow switch.
- Automatic water filling.
- Water gauges.
- Rubber antivibration mounts.
- Spring antivibration mounts.
- Water strainer.
- Serial communication card RS485. ⁽⁴⁾

(1) Available in the standard temperature range.

(2) Phase correction will apply on each unit. The device will be provided loose with clamps for connection to the panel.

(3) For modular applications.

(4) Can only be used on a master unit (in case of combination) or on single stand-alone units (non-modular application).

Important: Stand-alone units cannot be converted to modular units on project sites due to different controllers and different electrical panel configurations. When selecting the first FLEX unit a choice must be made: stand-alone or (near future) multiple units application.

Advantages

Eco-profile fans

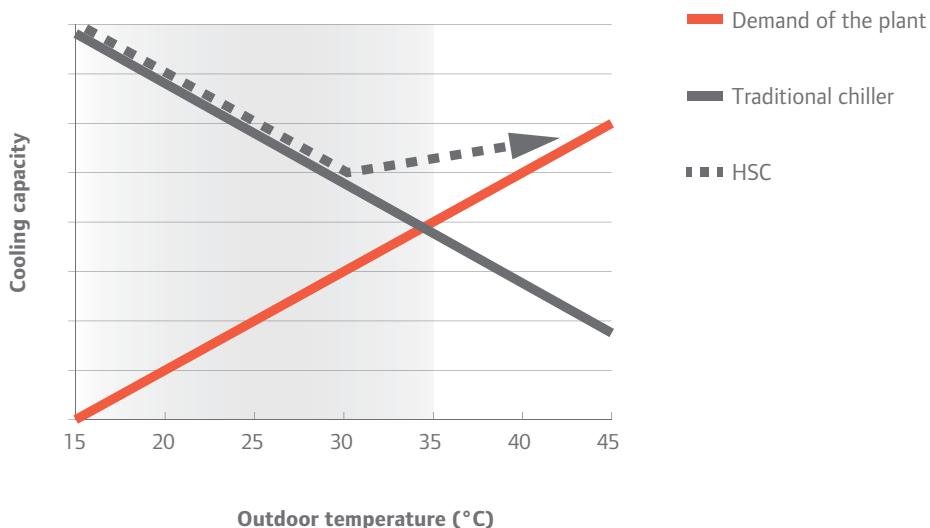

Due to the innovative profile, these fans ensure high efficiency with reduced power input and sound emissions.

HSC Hybrid Smart Cooling

High energy performances are guaranteed by the **HSC Hybrid Smart Cooling** system, covered by an international patent. Over certain outdoor air temperature values, water cooling is added to the air condensation. Electric power consumption remains the same, whereas the unit cooling capacity increases up to 30%, respecting perfectly the plant requirements. They have other exceptional advantages such as the refrigerant load charge reduction and a better corrosion resistance.

As outdoor air temperature rises, HSC cooling capacity increases

Non-stop continuous operation

The multiple units activation and the specially designed control system allows the system to always be reliable and operational.

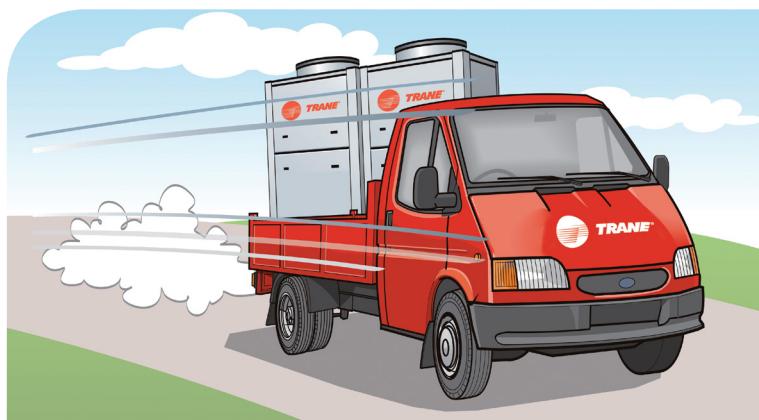

In case of failure, maintenance or repair of one system unit, the rest continue to work to ensure the reliability of the system.

In comparison with a packaged unit, the addition of just one module can guarantee the total power back up in case of failure.

Just in time system

The optimisation of the production processes and the advanced construction logic lead to a reduction of the construction times, respecting perfectly the plant requirements. They have other exceptional advantages such as the refrigerant load charge reduction and a better corrosion resistance.

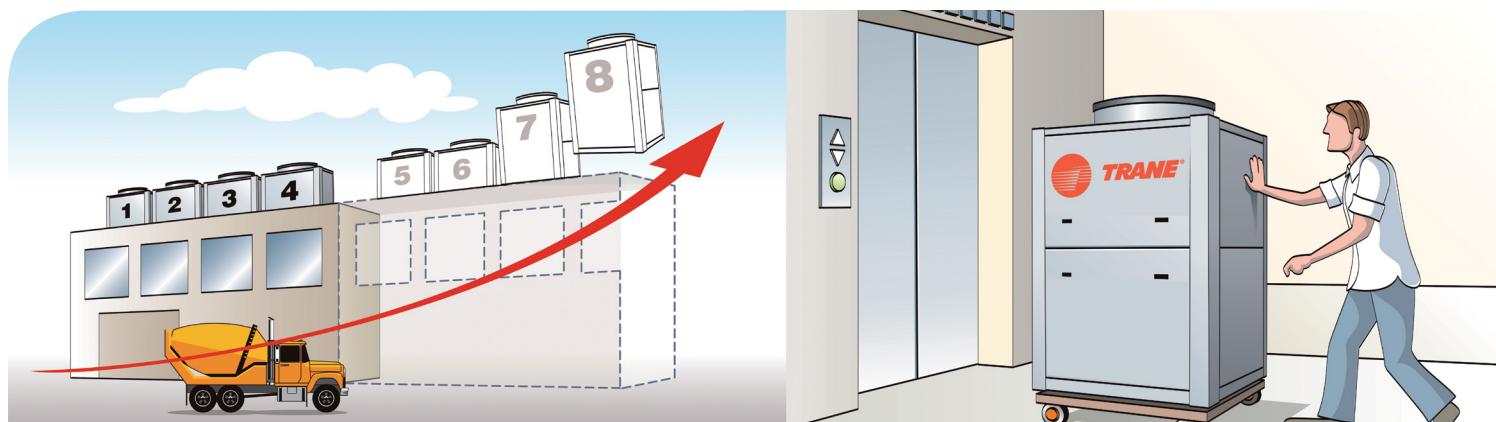

Easy to handle

Can be easily lifted and moved, allow to save money for crane and installation above all in historical buildings and city centers.

Flexible investment

The scalable system can be extended on site, in terms of capacity and features.
